Odoo Developer | ERP Systems Support | Linux & Server Administration | AI-Assisted Development

PROFESSIONAL SUMMARY

Odoo Developer with hands-on experience in ERP customization, broader ERP systems support, system integration, mobile and backend development, Linux administration, and server operations. Brings solid understanding of AI concepts and practical experience in applying AI-assisted development to improve implementation speed, debugging, technical research, and workflow optimization. Skilled in Odoo module customization, REST API integration, Dockerized environments, troubleshooting, and enterprise systems support.

CORE COMPETENCIES

ERP Development & Systems Support: Odoo module customization and configuration; ERP workflow understanding and operational support; business process alignment and system support; Odoo integration with external systems; ERP-related technical and functional support.

Mobile & Backend Development: Flutter and React Native cross-platform application development; backend integration through REST APIs; responsive UI/UX implementation; Firebase integration for real-time features; Django and Laravel backend support.

Linux, Servers & Technical Operations: Linux server setup and administration; server-side environment support and maintenance; Dockerized development and deployment workflows; shell scripting and automation; system troubleshooting and operational maintenance.

AI-Assisted Development: AI-assisted coding and implementation support; debugging and technical problem-solving using AI tools; AI-supported research, learning, and documentation; workflow optimization and faster prototyping through AI tools.

Infrastructure, Networks & IT Support: Network device setup and connectivity support; basic switch configuration and LAN troubleshooting; VoIP system setup and troubleshooting; Windows and Linux installation and maintenance; printer, PC, and end-user technical support; ticket handling and issue resolution.

ERP Systems Support: Broad understanding of ERP workflows, business operations, and enterprise system support; ability to align user requirements with operational processes and support technical and functional ERP scenarios across different business environments.

Collaboration & Delivery: Git version control and collaborative workflows; Agile development and teamwork; requirement understanding and cross-functional collaboration; documentation and handover practices.

PROFESSIONAL EXPERIENCE

Odoo Developer & DevOps Engineer – Tamkeen Technologies(Ekhaa ERP)

Project: Ekhaa ERP Implementation

June 2025 – Present

- Analyzed the legacy ERP environment and prepared a cloned server setup to support system review, validation, and controlled migration activities.
- Built and configured the server environments required for the client's new ERP implementation, including system preparation and deployment readiness.
- Installed, configured, and supported Odoo environments across multiple servers based on project requirements.
- Collaborated with cross-functional teams to gather requirements, align system behavior, and deploy technical solutions.
- Contributed to building and customizing Odoo 18 modules to align with business and operational needs.
- Prepared deployment environments, validated system readiness, and ensured successful service operation after setup and migration activities.
- Supported infrastructure-related tasks, environment configuration, and technical troubleshooting across ERP server environments.
- Worked on Linux-based server administration, deployment workflows, and operational support for Odoo systems.

Odoo Developer – ECOLOR Technologies

January 2024 – March 2025

- Developed and customized Odoo modules to support business and operational requirements across enterprise workflows.
- Integrated Odoo with external systems such as VoIP platforms, Keycloak, and inventory-related tools.
- Implemented user authentication and role-based access workflows using Keycloak.
- Collaborated with cross-functional teams to gather requirements, align system behavior, and deploy technical solutions.
- Supported Linux server administration, Docker-based deployment workflows, and automation-related tasks.
- Contributed to server environment support, technical troubleshooting, and operational maintenance across integrated systems.
- Applied AI-assisted approaches in technical research, debugging, and implementation support to improve delivery efficiency.

Freelance Developer – Mobile, Backend & Systems Support

Jun 2023 – Present

- Built and deployed cross-platform mobile applications using Flutter and React Native for practical business use cases.
- Designed responsive and user-focused interfaces tailored to business and client requirements.
- Developed and integrated REST APIs using Django-based backend services and Firebase real-time features.
- Handled Docker-based deployments, Linux system configuration, and server-connected application support.
- Delivered technical support services including network setup, device troubleshooting, and VoIP configuration.
- Supported connectivity, infrastructure-related operations, and integration workflows between frontend applications and backend enterprise systems.
- Used AI tools for problem-solving, prototyping, implementation support, and technical research during development workflows.

Technical Support Intern – University IT Lab

February 2020 – November 2022

- Supported lab infrastructure including PC setup, operating system installation, and local network configuration.
- Assisted in device connectivity, user support, and technical troubleshooting across lab systems.
- Installed and maintained Odoo environments for academic and internal operational use.
- Assisted in Alfresco configuration for document handling and workflow support.
- Managed MySQL and PostgreSQL databases for internal applications and system usage.
- Provided day-to-day infrastructure and end-user support across technical environments.

TECHNICAL SKILLS

Programming & Development: Dart, JavaScript, Python, Shell Scripting, Flutter, React Native, Django, Laravel, Firebase, REST APIs

ERP & Enterprise Systems: Odoo ERP, ERP workflow support, Keycloak, Alfresco

Database: PostgreSQL, MySQL

Tools & Environment: Git, Docker, Linux, Windows

Server & Infrastructure: Linux server administration, Dockerized workflows, shell automation, server support, technical troubleshooting

Networks & IT Operations: LAN support, switch connectivity basics, VoIP systems, device troubleshooting, end-user support

AI-Assisted Development: AI tools for coding, debugging, research, prototyping, workflow improvement, and technical documentation

EDUCATION

Bachelor's Degree in Information Technology | Hadhramout University | January 2020 – July 2024

ADDITIONAL INFORMATION

- Transferable IQAMA
- Fluent in Arabic and English
- Passionate about continuous improvement, AI-assisted development, and modern engineering practices
